# What is a Trading Card Game (TCG)?

It's a game where you play with a custom deck of cards that you put together from your collection. You choose how your fighter attacks, and his strategy for winning by how you build and play your deck. That's what makes this game fun. You get to play the way YOU want to. The starter deck that came with this rulebook is all you need to begin playing. Collecting more cards from booster packs allows you to make your deck stronger, increasing your chances of winning.

**Veteran Player?** Catch what's new on page 28.

**Examples?** If you want to see examples of how to play go to page 26.

**Reference Guide?** Use the Index on page 31.

## The Golden Rule

**Some cards are so powerful that they break the rules of the game. When a card specifically contradicts a rule in the rulebook, the card overrides the rule.**

# Game Overview

You play the part of either a Z Warrior or an evil nemesis in a battle to win two out of three games against an opponent. To win a game, your Main Personality (that's the character you are playing) faces off with your opponent's Main Personality in an all-out-brawl. During a game, energy attacks explode, physical attacks hit and Dragon Balls unleash their power just like in Dragon Ball Z.

## How to Win a Match

You win a match when you win two out of three games.

## How to Win a Game

**Survival Victory:** You win a game the instant your opponent's life deck is empty of cards.

**Dragon Ball Victory:** You win a game the instant you control all seven of Dragon Balls of the same set.

**When a game is over, both players reset their decks and start over.**

## What's In a Turn?

**A turn is made up of 3 steps:** Draw, Power-Up and Combat. Each player participates in every step with one player acting as the "active player" and the other as the "passive player." The active player for the turn gets to go first in each step in the game and the passive player always goes second. After all 3 steps are complete, the passive player now becomes the active player.

**1. Draw:** Both players draw 3 cards from the tops of their decks.

**2. Power Up:** Players power up, play Support cards and use effects in this step.

> **Power Up Your Personalities:** Players power up their Main Personalities (MPs) by a number of power stages equal to their MP's Power Up Rating (PUR). If you have multiple Personalities in play, you can split up the number of power stages you gain among them. This is covered on page 19.
>
> **Play Support Cards and Use Effects:** After every player has powered up, the active player now plays Support cards and may use effects on cards that happen during Power Up. After the active player finishes this, his opponent does the same. After that, Power Up ends.

**3. Combat:** Now the action busts loose. Players alternate attack phases where they can attack, play Dragon Balls, and play or use cards and effects. When 2 players pass in back-to-back attack phases, they discard down to 6 cards in hand and the step and turn end. (See p. 20).

# Let's Look at The Cards

## Personality Cards

**Main Personalities:** Personality cards represent who you are fighting as in the game. There are 2 versions of Personality cards: Main Personalities (MPs) and Allies. What's the difference? A MP is the primary character that you build your deck around. Allies are Personalities that usually play a supporting role in the game.

**How to Play and Use Them:** Personality cards start the game in play and stay in play the entire game. The effects on Personalities are "used" after you pay their costs and requirements. Generally, you use each effect on a Personality only once per turn.

**Power Stages:** These stages show how strong your Personality currently is. You use these numbers on the attack table to calculate damage from some attacks. You also pay power stages for costs on cards as shown later.

**Power Up Rating:** The Power Up Rating (PUR) is the total number of power stages that your Personalities gain each turn during Power-Up.

## Ally Personalities

**Rarity Symbol:**
This symbol tells you if a card is either a Common, Promo, Uncommon, Starter, or Rare.

**Level:** There are different levels of Personality cards. MPs go up to three levels and Allies have only one level.

**Traits:** Both MP and Allies have traits. Traits are aspects of a DBZ Personality. Think of traits as "labels" that put Personalities into sub-groups. Everyone knows Krillin® is a Human, so the "Human" trait appears in his text box.

## Scouter Card

A scouter is the card you use to keep track of your Personality's power stages. It also has an attack table you use to calculate base damage from some attacks. The backs of regular cards also work as scouters.

## Mastery Cards

**Want to Specialize in One Martial Art Style?**
You can choose to make your MP a master of one style by playing a Mastery card. By playing a Mastery card, you get the benefits of its effects, as well as qualify to use card effects that require you to have a Mastery card. To qualify for a Mastery card, all cards in your deck must be a combination of freestyle cards and cards that match your Mastery's style.

**What's a Styled Card?**
Cards that belong to a martial arts style have the style's name as the first word in the title as well as that style's kanji printed on it.

**What's a Freestyle Card?**
Freestyle cards do NOT have the martial arts style as the first word in the title, but do have the kanji for "white" printed on them. Freestyle cards also have white templates. Freestyle cards can appear in ANY deck, regardless of that deck's Mastery card.

# Dragon Ball Cards

**The Dragon Ball cards serve as the mystical Dragon Balls in DBZ.**

**How to Play and Use Them:**
Dragon Balls are played during Combat in your attack phase, and you use their effects when you play them. Dragon Balls stay in play after you play and use them.

**Capturing Dragon Balls:**
Dragon Balls are captured with card effects. If your card says "Capture!" then that card's effect can capture a Dragon Ball and put it under your control. When a Dragon Ball is captured, the player who controls it can immediately use its power or choose not to use its powers.

# Combat Cards

**How to Play and Use Them:**
Combat cards are played during an attack phase. To play a Combat card, you first meet its requirements and pay its costs. After that, you play the card and then immediately use it.

**Combat cards do a lot of different things:**
Some Combat cards perform an attack; others block an attack or create effects that impact the game, and some do a combination of all three! There are three types of Combat cards: Combat Energy, Combat Physical and Combat Event.

**Combat Energy**
Generally, these cards perform attacks of pure energy or defend against such attacks. You play these cards from your hand as an attack or as a defense to an attack.

**Attack Cost:** To use this attack, pay this many power stages and play the card from your hand.

**Sword Icon:** This icon tells you that this card performs an attack.

**Attack Type:** This tells you what kind of attack the card performs. A energy burst tells you that this is an energy attack. A fist tells you that the attack is a physical attack.

**Damage:** This is how much damage the attack deals.

**Card Number:** Every card has a number. The card number helps you keep track of your collection.

## Combat Physical Cards

Combat Physical cards generally either perform a physical attack or block a physical attack.

**Shield Icon:** This icon tells you that this card plays as a defense during your opponent's attack phase.

**Defense Type:** Each card tells you what kind of attack it can defend against.

## Combat Event Cards

Event cards represent the surprises that happen during battle. Events generally don't perform attacks.

## Support Cards

**How to Play and Use Them:** You play Support cards during Power-Up and leave them in play to use them later. Some Support cards create effects that last as long as the Support is in play. These Supports have the word "CONSTANT" in bold type in the text box. Other Support cards are used during an attack phase and then are discarded after use.

# Setting Up The Battle!

**Getting ready to play is easy.**

**To begin, put your Mastery card, MP and any Allies into play.** Each Personality gets 1 card each and the total of their level numbers must be 3 or less (see p. 24). Next, put the scouter card at zero on each of your Personality cards.

**Randomly decide who goes first.** If this is the second or third game, the loser of the prior game decides who goes first.

**Shuffle Your Life Decks.** Everyone starts the game with zero cards in hand.

This is where you play your Supports.

This is where you play your Dragon Balls.

Put your Mastery Card Here at the Start (Your starter won't have a Mastery card.)

Cards removed from the game go here.

Any cards discarded go here.

Put Your Allies Here before the game begins.

Put Your MP Here before the game begins.

# Game Basics

## Winning a Game:

**Survival Victory:** You win a game the instant your opponent's life deck is empty of cards.

**Dragon Ball Victory:** You win a game the instant you control all seven Dragon Balls of the same set.

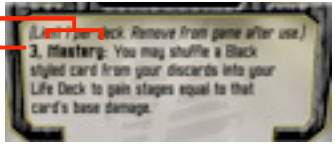
**How to Play and Use DBZ Cards:** In the DBZ TCG there are two things you can do with cards: you play them and you use them. Playing and using a card are two different things, and once you understand the difference, the rest of the game unfolds easily.

**What is playing a card?** Playing a card is taking a card from "out of play" and transferring it "into play" after meeting its requirements and paying its costs. Normally, you play cards from your hand, but some effects may allow you to play cards from other game zones like a discard pile or a life deck.

**What are costs and requirements?** When playing a card, you look inside the text box to see if it has a cost to play it. If you see a colon in the card's text, then all the text on the LEFT of that colon is either a cost or a requirement to play the card. If a number appears on the left side of a colon, then it means the card has a cost in power stages. If text appears to the left of the colon, then the card has a requirement(s) you must meet before you play the card.

This is the cost to play this card in power stages.

This is the requirement to play this card.



**Power Stages** are the numbers appearing to the right side of Personality cards. You track power stages with the Scouter card that came in this starter. To pay power stages, you lower your Scouter card a number of stages equal to the card's cost.

EXAMPLE: Raditz is your Main Personality and you decide to play the card Black Dragon Support from your hand. This card has a cost of 3 power stages and requires you to have a Mastery card to play it. For this example, you have Black Overpowering Mastery in play and your scouter is set to Raditz's top power stage. You've met the requirement of a Mastery card, so you lower you Scouter down 3 power stages to pay the cost and play the card Black Dragon Support on your playmat face-up.

**What is "using" a card?** Using a card is doing the instructions printed on the card. These instructions appear as text to the right of colons as well as some icons and numbers appearing in a box to the left of some card's text boxes.

Once you pay the cost to play a card, you don't have to pay its cost to use it. As long as the card is in play, you do not have to pay the cost or meet the requirement again.

EXAMPLE: During Combat, you decide to use Black Dragon Support, so you use the effect on Black Dragon Support and do what it says according to the rules.

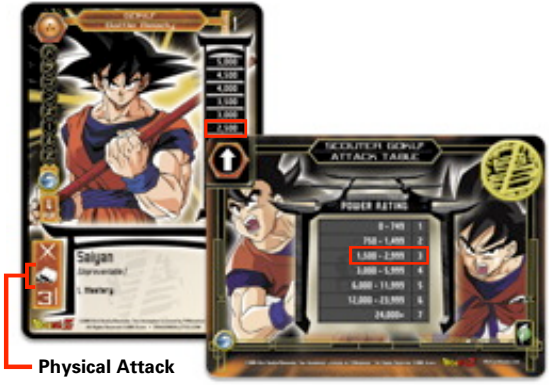
**Why is this important?** You'll discover that some cards are played and used at the same time. Other cards are played and then used later in the game, while some cards are constantly in use.

**How Do You Deal Damage?** Damage comes from attacks! Physical attacks have a fist icon and energy attacks have a starburst icon. When you perform an attack, your attack states how to calculate damage. If damage is a number, then the attack deals that much damage.

Energy Attack

7 = 7 Damage

If damage is listed as "AT" then you use the Attack Table on the scouter to calculate damage. Just look at your Personality's power stage and see how much damage it deals.



Physical Attack

**Taking Damage:** When your opponent's Personality takes damage, he can either discard that damage from his life deck or take the damage in power stages. If he takes the damage in life cards, he discards cards from the top of his life deck equal to the damage dealt.

If a Personality takes damage in power stages, he lowers his scouter one stage for each point of damage until the number of stages lowered equals the damage dealt. If a Personality reaches the zero power stage with damage remaining, he must discard the remaining damage in life cards.

EXAMPLE: Vegeta hits Goku with his physical attack. It cost 1 stage and does 4 damage. Goku can take the damage by either discarding 4 cards from the top of his life deck, or by lowering his scouter down 4 power stages. Goku chooses power stages and drops his scouter 4 stages.

EXAMPLE: Goku hits Vegeta with a successful energy attack! The attack Goku played from his hand uses the attack table. Goku's current power rating is 2500. The table shows that Goku's attack does 3 damage. Vegeta is at one power stage above the zero stage. Vegeta chooses to take the damage in power stages and lowers his scouter to zero and then discards 2 cards from his life deck.

# The Steps of Play in Detail

**1. Draw:** This is the step where both you and your opponent draw 3 cards from the top of your life decks.

A. The active player draws his 3 cards.
B. The passive player draws his 3 cards.

**2. Power-Up:** Fighters prepare for the brawl to come! Both players power up their Personalities by raising their scouters up by a number equal to their Power Up Rating (PUR). Then both players play their Supports and use any effects that are available in this step.

**A. Power Up!** Each player now gains power stages on his MP and Allies by moving his scouter cards up a number of stages equal to the PUR of their MP.

Each player can divide their power stages gained each turn among any of his Personalities in play. If no Personality can gain any more power stages, the remaining power stages created by the PUR vanish.

A. The active player powers up his Personalities.
B. The passive player powers up his Personalities.

EXAMPLE: You are the active player. Goku is your MP and Krillin is your Ally. Goku's PUR is 4. That means Goku and Krillin have 4 stages they can gain between them in this step. You choose for Goku to gain 3 power stages and Krillin to gain 1. Now your opponent powers up his Personalities.

**B. Play Supports:** Now each player has a chance to play Support cards.

A. The active player plays his Supports.
B. The passive player plays his Supports.

**C. Use an Effect on a Card in Play That States You Use Them During Power Up:**

A. The active player uses any effects on cards in play that he can use in this step.
B. The passive player uses any effects on cards in play that he can use in this step. When the passive player finishes with his effects, this step ends.

**3. Combat!** This is the step where everything explodes! Attacks are thrown, defenses raised and Dragon Balls are unleashed! During Combat, the player who performs an attack is the "Attacker" and the player who defends against an attack is the "Defender."

**How Combat Works:** While in Combat, you and your opponent each alternate attack phases, starting with the active player. The attack phase is where you get to do one of the following choices.

- **Use an effect** on a card you have in play that can be used in place of an attack in an attack phase.
- **Attack** with a Combat card or Personality power.

- **Play an Event** from your hand and use it.
- **Play a Dragon Ball** from your hand and use it.
- **Use a Support card** that does not have a "CONSTANT –" effect.
- **Pass.**

**Ending Combat:** You and your opponent alternate attack phases until both of you pass in your attack phases one after another. When that happens, players discard down to 6 cards and the step and turn end.

**A New Turn Begins:** You both go back to Draw, and the active player becomes the player to the right of the active player.

**How Attacks Work:** If you choose to attack in your attack phase, your opponent gets to defend *in the same phase* that you attack. After the attack and any defenses resolve, damage is dealt (if any) and you go to your opponent's attack phase.

**First, You perform an attack.**

**There are Two Ways to Perform an Attack:**
Play a combat card from your hand that can perform an attack, or use a card in play that can perform an attack.

**Playing a Combat Card as an Attack:** To attack with a Combat card, the Combat card must be an attack. If a Combat card performs an attack, you will see a crossed swords icon. To attack with a Combat card choose for one of your personalities to perform the attack and play it as described earlier. When you use the attack, any effect in the text box is used before anything else happens, except for effects starting with "SUCCESSFUL -" (Effects starting with "SUCCESSFUL -" are used when an attack becomes successful.)

**Attacking with a Personality Card:**
Many Personalities in the game perform attacks.

Unlike Combat cards, they aren't discarded after use. You "use" the card to perform the attack printed on him and he stays in play.

Attacks and effects are used only once per turn. After you use an attack or effect on a Personality card, you cannot use that attack or effect again until the next turn.

**Attacks on Personality Cards Cannot be Used by Other Personalities.** If a Personality card has an attack on it, that attack is usable only by that Personality, and that Personality must meet the card's cost and requirements, perform the attack and use the effects the attack creates.

## Second, Your Opponent Gets To Defend.

Your opponent defends during your Attack Phase. There are four ways he can do this.

**1. Refocus with an Attack!** Refocusing is using an attack as a defense. To refocus an attack, you must meet the requirements of the attack and pay its costs. After that, you use the attack as your defense and prevent damage equal to the damage on your attack (including modifiers that increase your attack's damage). You also use any effects on the attack except for "SUCCESSFUL" effects which only work when the attack is used as an attack instead of a defense. These effects are used before your opponent's attack resolves.

**2. Play a Block from His Hand:** Blocks are Combat cards that have a shield icon in them. An opponent can only play a block if it stops the kind of attack performed against him.

**3. Play a card from his hand** that prevents damage from that type of attack. (The card preventing damage must prevent damage from that type of attack). Effects that prevent damage don't stop the attack, they lessen the damage from the attack.

**4. Use an Effect on a Card in Play** that can stop the attack or prevent damage from that attack.

## Third, the Attack Resolves.

**If the Attack is Stopped, the Attack Phase ends.**

Otherwise, the attack is successful. An unstopped attack may be successful even if it deals no damage.

**If the Attack is Not Stopped, You Now Calculate the Damage the Successful Attack Deals.** You do this by first finding how much damage the attack does, and then subtracting any damage your opponent prevented.

**Deal the Damage.** Your opponent chooses which Personality will take all the damage from the attack. The chosen Personality then can take the damage in power stages or in life cards. When there are no power stages left to take damage, any damage dealt must be taken in life cards.

## Fourth, SUCCESSFUL Effects Now Resolve.

After the attack deals damage, any effect on the attack following the word "SUCCESSFUL -" resolve.

**Use the Attack Sequence!** If you are new and want a handy guide on how to attack, go to the Attack Sequence on the back of the rulebook. It will guide you step by step through an attack.

# Other Rules

**Base ____:** Many cards refer to terms like "base damage" or "base PUR" etc. The term "base" refers to the value of a number in a game before any modifiers apply to it.

**Card Control:** When a card targets one of your opponent's cards, it means cards that your opponent has in play. DBZ defines card control in game text as cards you "have" or cards your opponent "has."

Example: "If you have Goku..."

**Card Effect Conflicts:** If 2 cards conflict with each other because one allows a player to do something and another prevents a player from doing something, the card that says "no" overrides the other card's effect.

**Card Ownership:** The "owner" of a card is the person who brings the card to the game as part of his deck. Any time a card is placed in one of the following game zones, it reverts to the owner's game zone: the Removed From the Game Pile, Discards, Life Deck or returned to its owner's hand.

**Cherry Picking Rule:** When a player searches through a life deck for a card, he must show the card searched for to all opponents. The owner of the deck now shuffles that deck and offers a cut.

**Constant Effects:** These effects have the word "CONSTANT" in all caps in front of them. They are active as long as the card they are printed on is in play.

**Do What You Can Rule:** Except for costs and requirements, if an effect instructs you to do something that you can only partially do, do what you can and continue play.

**Floating Effects:** Any effects created that use text similar to "for this turn," or "for this turn and the next" or other similar language are floating effects. These effects are active for the period stated by the effect's text, even if the card that created them is not in play.

> EXAMPLE: The card Paid Off has this text, "When any player gains stages, increase that amount by +1 for this turn and the next." This effect lasts until the end of the next turn even though Paid Off goes to the discard pile immediately.

**Gaining and Losing Stages:** When an effect lets you gain stages (i.e. "Gain 2 stages."), you can choose to spread those stages out any way you want, unless the effect tells you exactly who gains the stages.

When an effect has you lose stages (i.e. "Your opponent loses 2 stages.") you can choose to spread those stages out any way you want, unless the effect tells you exactly which personality loses the stages. You do NOT discard cards from your deck if all your personalities run out of stages before you pay for all the stages you lose from the effect.

**Italic-Parens Text:** Text appearing at the top of text boxes in parentheses and italics are instructions that are active on the card whether or not the card is in play.

**Modifiers:** Any increase or decrease in a value inside a game.

**MPs are Only One Card:** You can't play a level 1 Goku on top of a level 2 Goku.

**Play vs. Put in Play:** When you "play" a card, you pay its costs and meet its requirements to take it from out-of-play into play. When you "put" a card in play, you take it from out-of-play into play for no cost, but still meet its requirements.

**Prevent:** To lessen damage from a successful attack.

**Scouter Usage:** Scouters do not have to match the Personality printed on the scouter. Any DBZ card outside of your deck can serve as a scouter.

**Selecting Random Cards from Hand:** When cards tell you to choose cards at random from your opponent's hand, your opponent shuffles his hand and holds it up with the backs of the cards facing you. Now you choose the random cards.

**Stop:** To block an attack. The attack is not "Successful" and no damage is dealt.

**Timing Conflicts:** If two of your effects occur at the same time, you choose the order the effects resolve. If your and your opponent's effects occur at the same time, the active player's effects resolve first followed by the passive player's effects.

**Unpreventable:** When an attack is "Unpreventable" then any damage that attack deals cannot be prevented. And your opponent cannot play or use any effects or refocused attacks that would prevent damage as a defense against that attack.

**Unstoppable:** When an attack is "Unstoppable" no effect can stop that attack. And your opponent cannot play or use any effects that would stop an attack as a defense against that attack.

**Deck Construction:** Your "deck" is your life deck plus any Personalities or Mastery cards you have. Your "life deck" is the 60 card deck that you draw from in the game.

**Life Deck Construction:** Life decks must be exactly 60 cards and cannot contain Personality or Mastery cards. If you have a Mastery card, all styled cards in your deck must match the style of your Mastery card. You may have only 1 Mastery card for your MP.

**Named Cards:** If you have any Named cards in your deck, you must have the Named Personality as one of your Personalities in the game. Only that Personality may play with those named cards.

**One MP:** Each deck must have exactly one Main Personality card of either level 1, 2 or 3.

**Ally Uniqueness:** No Allies in a deck can share the same name as another Ally in that deck or that deck's MP.

**Personality Levels Must Sum to 3 or Less:**
All your Personalitys' levels must sum up to 3 or less.
There are 3 ways this can happen:
One Level 1 MP and two Level 1 Allies, or a level 2 MP and a level 1 Ally, or a Level 3 MP.

EXAMPLE: You can have a Level 1 Goku, a Level 1 Vegeta, and a Level 1 Krillin in play when the game begins 1 + 1 + 1 = 3. Or you can have a Level 2 Goku, and a Level 1 Krillin 2 + 1 = 3. Or you can have a Level 3 Goku 3 = 3.

**Dragon Balls:** These cards are limited to one copy of each per deck and one type per deck (So no dupes and only one type of Dragon Ball: Earth or Namek.)

**Card Copy Limits:** Cards with the same title are limited to 3 copies per deck.

**The Difference Between "Unstoppable" and "Unpreventable:"** An "Unstoppable" attack is like a boxer with his guard down, he can't keep a punch from hitting him, but if he "rolls" with the punch, he can still prevent some of its damage. "Unpreventable" means you can stop the attack, but if it's successful nothing can lessen its damage.

EXAMPLE: Preventing Damage: Goku attacks with Goku's Kamehameha which has this effect:
Energy attack for 22 Damage (Unstoppable.) 8: Put your top 6 discards at the bottom of your Life Deck. SUCCESSFUL - Capture!" First, Goku lowers his scouter 8 stages. Next, he puts any 6 discards at the bottom of his deck. Raditz now defends. He can't stop the attack because is "Unstoppable," but he can prevent its damage. He refocuses with Black Left Blast (p. 11) and prevents 7 damage. Raditz now takes 15 damage. Since the attack is successful, Goku captures a Dragon Ball from Raditz because of the SUCCESSFUL effect "Capture."

EXAMPLE: Stopping an Attack: Goku attacks with his personality power (p. 6). Physical Attack for 3 damage (Unpreventable) 1: Mastery. To attack, Goku must have a Mastery card (see the requirement "Mastery" next to the colon) and pay 1 stage. This attack is "Unpreventable" which means his opponent cannot lessen its damage from effects or refocusing.

**Playing Support Cards:** When you play a Support card, you first pay the cost on the card appearing to the left of a colon. Then you place it face-up on the area of the playmat marked "Support Cards." To use a CONSTANT effect on a Support card, just leave it in play. To use an effect that isn't a CONSTANT effect, discard the Support card and use the effect during an attack phase as described by the card's text.

EXAMPLE: You play the Support card Black Dragon Support. (p. 13) Looking to the left of the card's

colon, you see that you need a Mastery card to play Black Dragon Support and that the card costs 3 stages to play. Since you have a Mastery card in play, you pay 3 stages by lowering your scouter down 3 stages. Now you put Black Dragon Support into play.

Later, during Combat, you can use the effect on Black Dragon Support. You do this by choosing to use the effect during your attack phase: "Shuffle a Black style card from your discards into your life deck, to gain stages equal to that card's base damage." You now do what the effect says and discard Black Dragon Support.

**Playing and Using Combat Cards:** To play a Combat card that isn't an attack, you must meet the requirement to play the card, pay the cost on the card that appears to the left of the card's colon and then play the card from your hand. You now use the effect printed on the card.

EXAMPLE: You decide to play Black Preparation. (p. 12) First, you pay the 2 stages in cost. Then you use its effect and search your life deck for a Black Style Support and play it. You must pay the cost of the Black Style Support you searched for.

**How to Use a Personality Power that Isn't an Attack:** Except for CONSTANT effects, Personality powers must be used during an attack phase of a Combat step. To use a Personality Power during combat, pay the cost and use the power. After you use the effect, you cannot use it again until the next turn.

EXAMPLE: You have Piccolo in play as your MP. His effect is "2: Draw a card." To use this effect, pay 2 stages and draw a card during your attack phase.

# Veteran Player Section

## What's the Difference Between the DBZ CCG, DBGT TCG and the New Z?

**New Dragon Ball Rules:** You play Dragon Balls during your attack phase. Dragon Balls are treated as any other card.

No special rules anymore. Discard them, remove them from the game, search for them. Dragon Balls do not have to be specifically mentioned anymore for an effect to target them and they don't go to the bottom of your life deck when taken as damage.

**Instant Victories:** You win the INSTANT your opponent has no cards in his life deck or the INSTANT you control all seven Dragon Balls (even if you acquire the last Dragon Ball by capturing it).

**Level Definition:** Level is now only a number and not a card. If you play a level 2 Goku, you only have one card of Goku in play – Goku Level 2. You don't stack a Goku Level 1 Card on top of a Goku Level 2 card. All the levels of your Personalities must add up to three or less.

**Named Cards:** Named cards have the name of a DBZ Personality in its title. Only the Personality named in the card can play or use the Named card. You can have 3 copies of the same named card in your deck, not 4 like in prior games.

**No Hero/Villain Deck Alignment:** Now you can mix DBZ hero/villain characters in your deck any way you want.

**No Most Powerful Personality Victory:** The new use of levels removes this victory condition.

**One Type of Damage:** In Old Z, damage came in two forms: life cards and power stages. Now there is only one type of damage. When you take damage you can choose to either take it in life cards or in power stages. If you choose power stages, you still discard 1 card from your life deck for each point of damage you take while your Personality is at the 0 power stage.

**Shortened Steps:** There are only three steps to the game now: Draw, Power-Up, and Combat.

**Simpler Ally Rules:** Each Ally you have in play counts as one of the three "Levels" you have to spend when the game begins. See p. 24.

# Steps of Play

**1. Draw:** Both players draw 3 cards.
**2. Power-Up:**
A. Players power up their Personalities.
B. Players play Support cards
C. Use effects on cards in play that are usable in this step.
**3. Combat:** Players Alternate Attack Phases. Players can perform physical and energy attacks, play Dragon Balls, use Support cards, play Combat Events. When both players pass one-after-another in their attack phases, they discard down to 6 cards in hand and Combat and the turn ends.

# The Attack Sequence

This is the exact sequence that each attack goes through.

1. **Player Chooses One of His Personalities to Perform an Attack.** There are two ways to perform an attack: play a combat card from your hand that can perform an attack, or use a card in play that can perform an attack.
2. **Player Chooses an Attack and Meets the Requirements to Use That Attack (if any).** Requirements are words appearing on the left side of a colon.
3. **Player Pays the Power Stage Cost of the Attack (if any).** The player lowers the scouter on the attacking Personality by the number of stages in the cost.
4. **Any Effects Created by the Attack are Used** except for "SUCCESSFUL -" effects.
5. **The Defender May Defend** with effects that work against the type of attack to either stop the attack, or prevent damage from attack.
6. **If the Attack is Stopped, the Attack Phase is Over.** Otherwise, it is successful.
7. **Calculate the Damage the Attack Deals.** Take the damage the attack does and subtract the damage prevented.
8. **Deal the Damage from the Attack.** Your opponent now chooses how to take the damage dealt: in life cards or in power stages on one of his Personalities.
9. **Any "SUCCESSFUL -" Effects From the Attack are Used.**
10. **Discard any Appropriate Cards.** If you attacked with a Combat card or your opponent defended with a Combat card or Support card, discard those cards.
